

Alector Company Overview

September 2022

Forward-Looking Statement

This presentation contains forward-looking statements that involve substantial risks and uncertainties. All statements other than statements of historical facts contained in this presentation are forward-looking statements. In some cases, you can identify forward-looking statements by terminology such as “anticipate,” “believe,” “continue,” “could,” “estimate,” “expect,” “intend,” “may,” “plan,” “potentially,” “predict,” “should,” “will” or the negative of these terms or other similar expressions. Forward-looking statements contained in this presentation also include, but are not limited to, statements regarding: our future financial condition, results of operations, business strategy and plans, plans, timelines and expectations related to our product candidates and our other clinical and pre-clinical programs, including with respect to the availability of data, the initiation of future clinical trials and plans and expectations regarding planned regulatory filings with respect to such programs; and objectives of management for future operations, as well as statements regarding industry trends.

We have based these forward-looking statements largely on our current expectations and projections about future events and trends that we believe may affect our financial condition, results of operations, business strategy and financial needs. These forward-looking statements are subject to a number of risks, uncertainties and assumptions, including, among other things: Alector’s plans relating to the development and manufacturing of its product candidates and research programs; the ability of Alector, Inc.’s (“Alector”) clinical trials to demonstrate safety and efficacy of its product candidates, and other positive results; the timing and focus of Alector’s future clinical trials, and the reporting of data from those trials; Alector’s plans relating to commercializing its product candidates, if approved, including the geographic areas of focus and sales strategy; the expected potential benefits of strategic collaborations with third parties and Alector’s ability to attract collaborators with development, regulatory and commercialization expertise; Alector’s estimates of the number of patients in the United States who suffer from the diseases it is targeting and the number of patients that will enroll in its clinical trials; the size of the market opportunity for Alector’s product candidates in each of the diseases it is targeting; Alector’s ability to expand its product candidates into additional indications and patient populations; the success of competing therapies that are or may become available; the beneficial characteristics, safety, efficacy, and therapeutic effects of Alector’s product candidates; the timing or likelihood of regulatory filings and approvals, including Alector’s expectation to seek special designations, such as orphan drug designation, for its product candidates for various diseases; Alector’s ability to obtain and maintain regulatory approval of its product candidates; Alector’s plans relating to the further development and manufacturing of its product candidates, including additional indications that it may pursue; existing regulations and regulatory developments in the United States and other jurisdictions; Alector’s continued reliance on third parties to conduct additional clinical trials of its product candidates, and for the manufacture of its product candidates for preclinical studies and clinical trials; and the other risks, uncertainties and assumptions discussed in the public filings we have made and will make with the Securities and Exchange Commission (“SEC”). These risks are not exhaustive. New risk factors emerge from time to time and it is not possible for our management to predict all risk factors, nor can we assess the impact of all factors on our business or the extent to which any factor, or combination of factors, may cause actual results to differ materially from those contained in, or implied by, any forward-looking statements. You should not rely upon forward-looking statements as predictions of future events. Although we believe that the expectations reflected in the forward-looking statements are reasonable, we cannot guarantee future results, levels of activity, performance or achievements.

This presentation also contains results based on data from our clinical trials. These clinical trials are ongoing and this presentation does not speak to, and you should make no assumptions about, any additional data. In addition, the information we have chosen to publicly disclose regarding our product candidates has been selected from a more extensive amount of available information. You or others may not agree with what we determine is the material or otherwise appropriate information to include in our disclosure, and any information we determine not to disclose may ultimately be deemed significant with respect to future decisions, conclusions, views, activities or otherwise. If the initial data that we report differ from updated, late, final or actual results, or if others, including regulatory authorities, disagree with the conclusions reached, our ability to obtain approval for, and commercialize our other product candidates may be harmed, which could harm our business, financial condition, results of operations and prospects.

Except as required by law, we undertake no obligation to update any statements in this presentation for any reason after the date of this presentation.

We have filed Current Reports on Form 8-K, Quarterly Reports on Form 10-Q, Annual Reports on Form 10-K, and other documents with the SEC. You should read these documents for more complete information about us. You may obtain these documents for free by visiting EDGAR on the SEC website at www.sec.gov.

This presentation discusses certain investigational therapeutic agents, which have not yet been approved for marketing by the U.S. Food and Drug Administration. No representation is made as to the safety or effectiveness of our product candidate for the therapeutic use for which it is being studied.

This presentation contains statistical data based on independent industry publications or other publicly available information, as well as other information based on our internal sources. We have not independently verified the accuracy or completeness of the data contained in these industry publications and other publicly available information. Accordingly, we make no representations as to the accuracy or completeness of that data.

Immuno-Neurology: Alector's Therapeutic Strategy for Degenerative Brain Disorders

Recruiting microglia, the brain's immune system, to potentially cure neurodegeneration

Using the immuno-oncology concept of harnessing the immune system as a broad, effective and long-lasting therapy

Multiple programs are in or entering the clinic for multiple neurodegenerative diseases

Immuno-neurology: targeting the brain immune system as a novel therapeutic strategy for dementia and neurodegeneration

Genetic Rationale for Immuno-Neurology

Many AD risk genes are regulators of the microglia brain immune cells

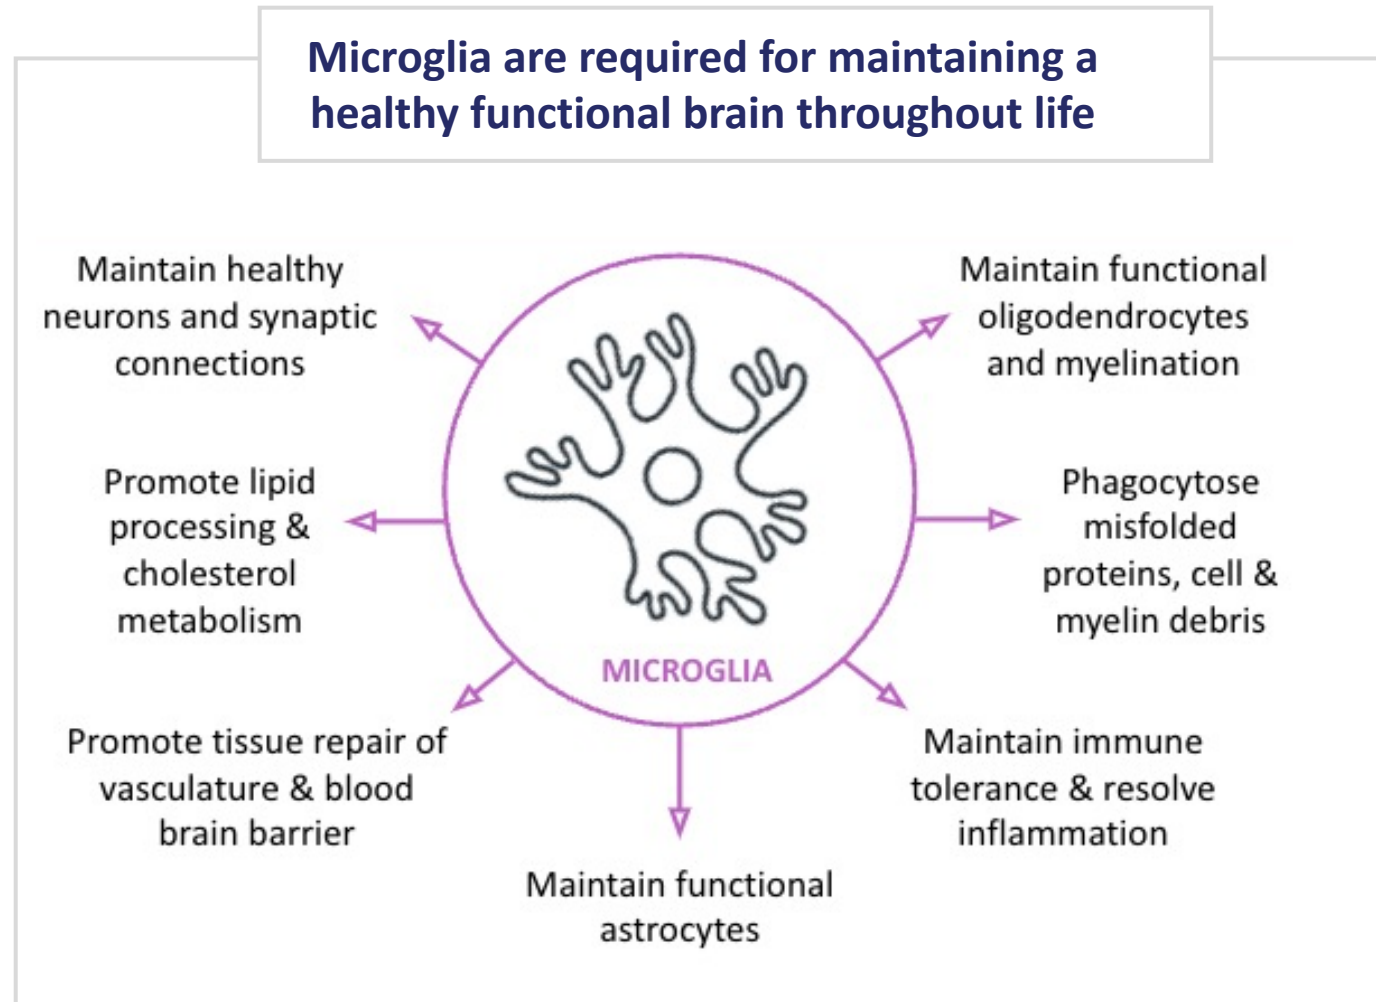

(Arrows in black)

Alector's programs are **boxed**

Bellenguez C et al. *Nat Genet.* 2022; 54(4): 412–36.

Biological Rationale for Immuno-Neurology: The Microglia Brain Immune System is Essential for Brain Function and Health

Targeting microglia immune checkpoints and harnessing microglia to cure neurodegeneration

Microglia Are Essential for Brain Health in Mouse Models

- “Microglia jointly degrade fibrillar alpha-synuclein cargo by distribution through tunneling nanotubes”¹
- “Negative feedback control of neuronal activity by microglia”²
- Absence of microglia in AD mice lead to cerebral amyloid angiopathy, hemorrhages, calcification, and lethality³
- Transplantation of microglia reverses these pathological changes³

Short survival without microglia (5x-FIRE)³

Microglia Are Essential for Brain Health in Humans

Loss of microglia due to CSF1R mutations leads to neurodegeneration "Adult- Onset Leukoencephalopathy"

Patients experience range of psychiatric, neurocognitive, and motor symptoms; Average age of onset is ~43

Rapid brain tissue loss

Patient VI
(c.2442+1G>T)
48 yo
5 Years before onset

54 yo
1 Year after onset

MRI shows brain ventricles dilation

~ 6 Year Survival Rate

Rapid Cognitive Decline

Portfolio of Product Candidates Targeting Genetic Causes of Neurodegeneration as well as Promising Innate Immune System Targets for Oncology

	TARGET	CANDIDATE	RESEARCH	PRECLINICAL	PHASE 1	PHASE 2	PHASE 3	COMMERCIAL RIGHTS
Progranulin Franchise	PGRN	AL001	FTD-GRN					 
		AL001	FTD-C9orf72					 
		AL001	ALS*					 
		AL101	Healthy volunteers for AD and PD					 
Alzheimer Programs	TREM2	AL002	Alzheimer's disease					 
	MS4A	AL044	Alzheimer's disease					
		AL044	Orphan neuro indication					
Oncology Programs	SIRP-alpha	AL008	Solid tumors					
	Multi-Siglec	AL009	Solid tumors					

Target indications include
AD, PD, FTD, MS
& cancer

12+ programs

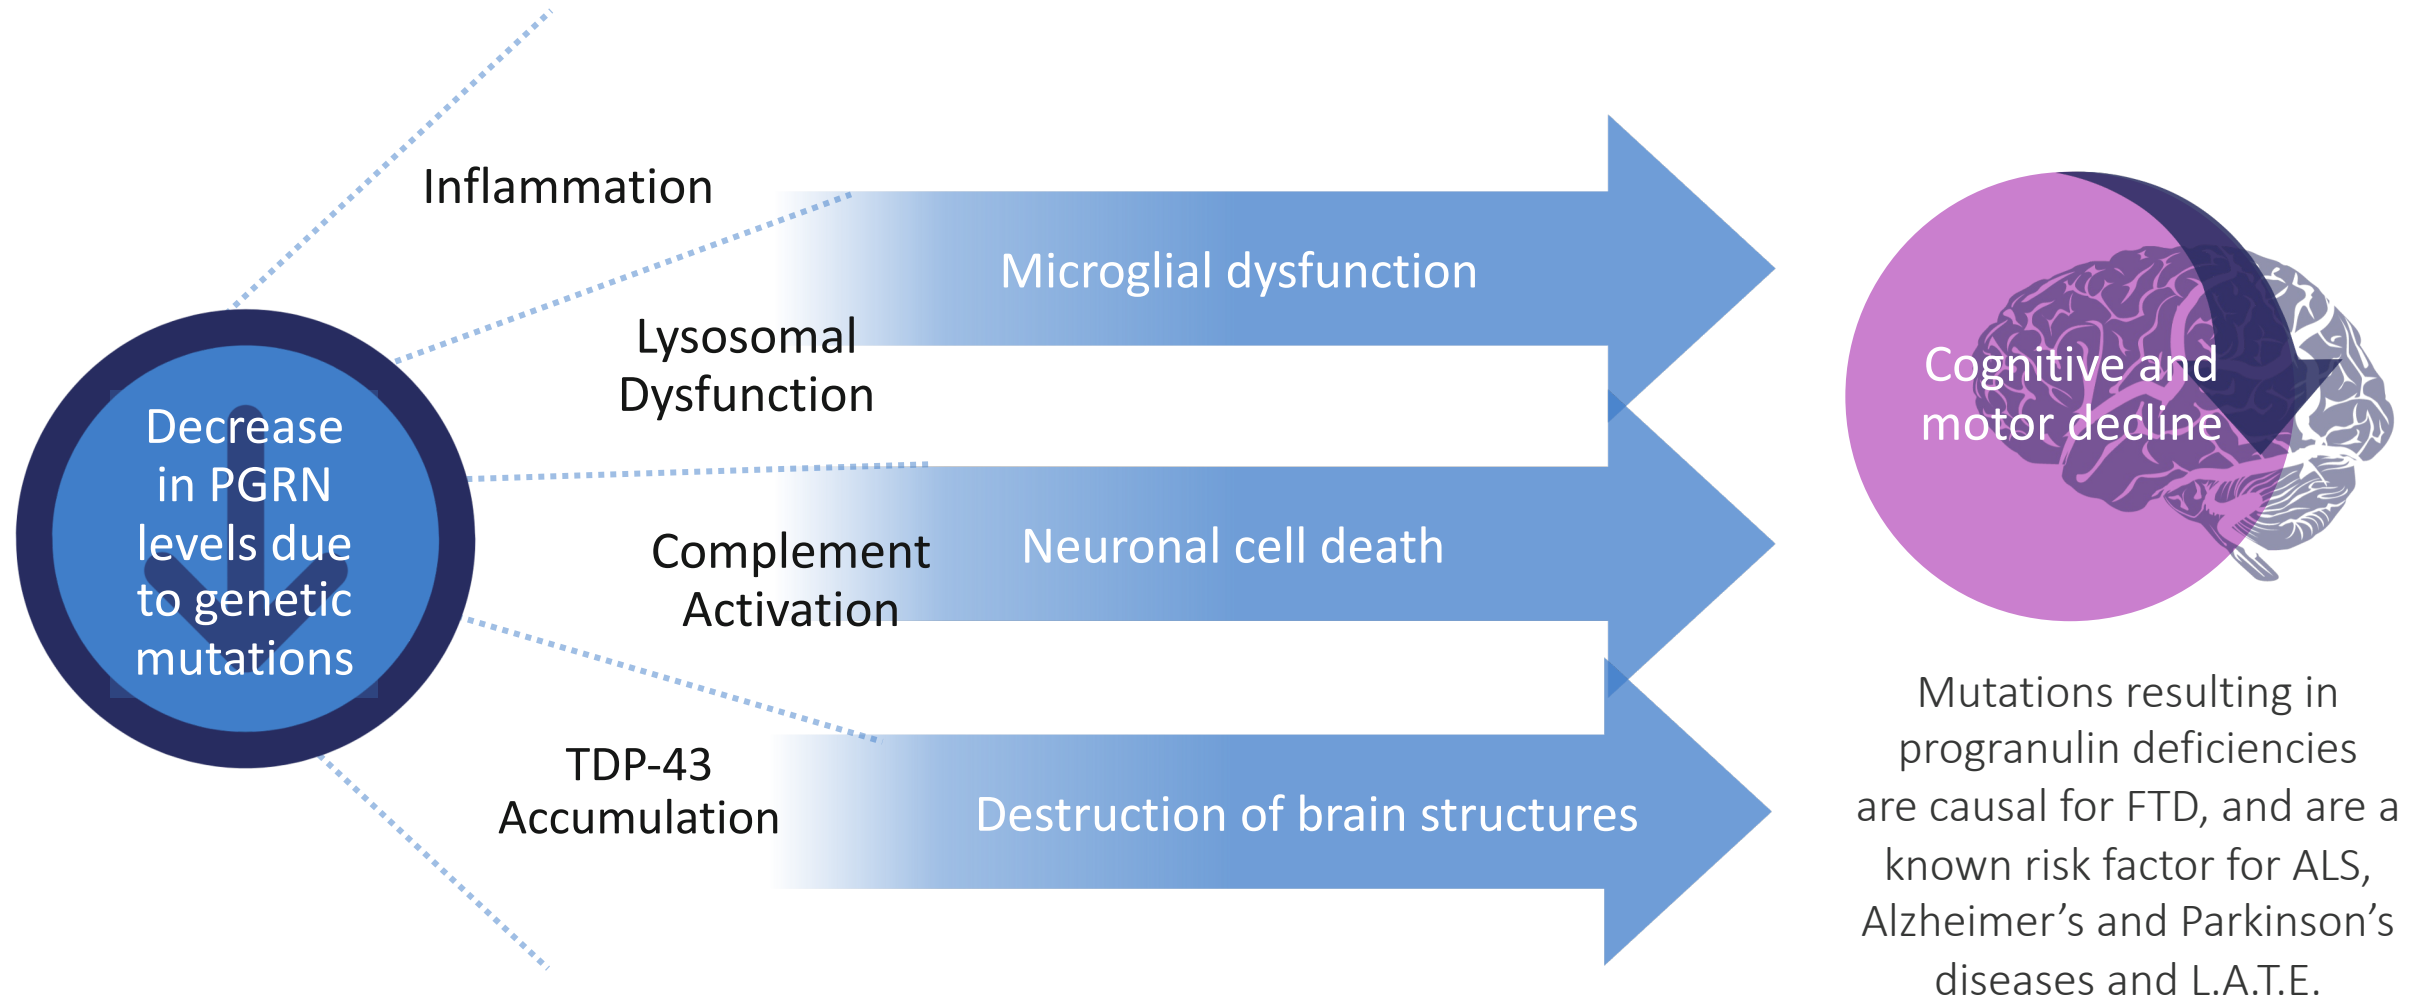

IP portfolio contains 50+ patent application families, which include 20 issued patents and >450 pending patent applications directed to more than 20 targets and/or technologies

AL001 and AL101: Targeting Progranulin to Restore Function of Microglia

MECHANISM

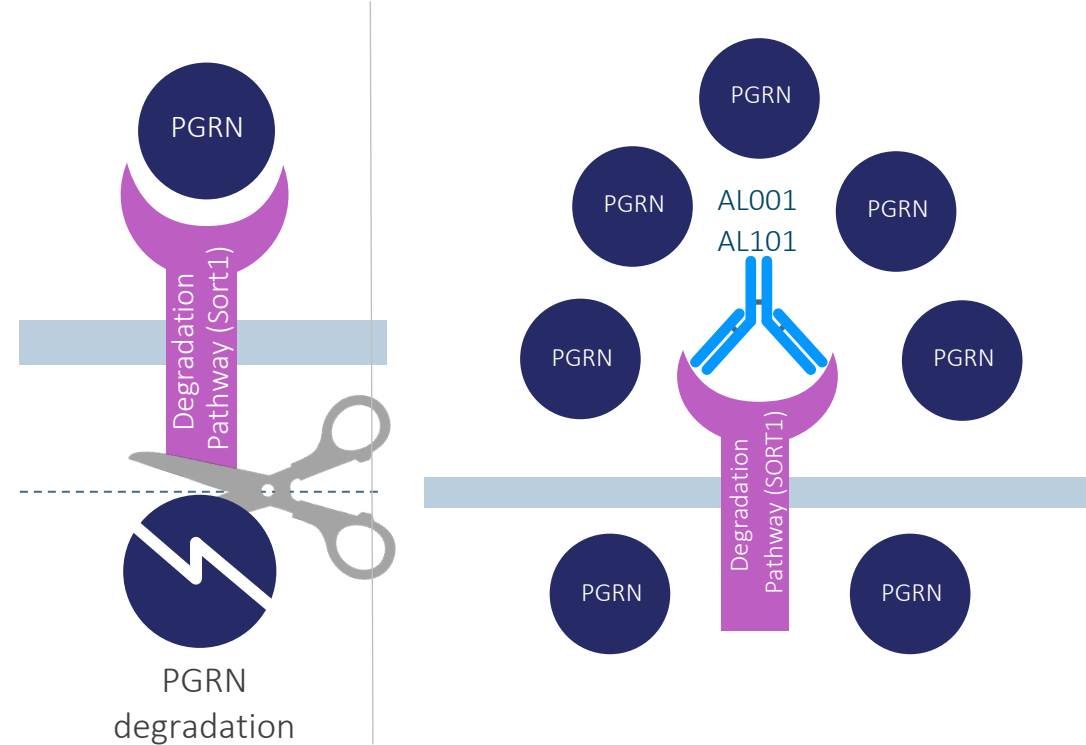

Increases the half-life of PGRN by blocking Sortilin, a degradation receptor, in order to restore PGRN to normal levels

AL001 STATUS

- Orphan Drug and Fast Track Designation
- Phase 1 studies in healthy volunteers complete
- Data presented from ongoing Phase 2 study in FTD-GRN and FTD-*C9orf72*
- Currently evaluating study design options for Phase 2b study in patients with all forms of ALS, including the *C9orf72* mutation
- Pivotal Phase 3 study in FTD-GRN actively enrolling

AL101 STATUS

- Ongoing Phase 1 study in healthy volunteers

Frontotemporal Dementia: A Rapidly Progressive Form of Dementia with No Current Treatment

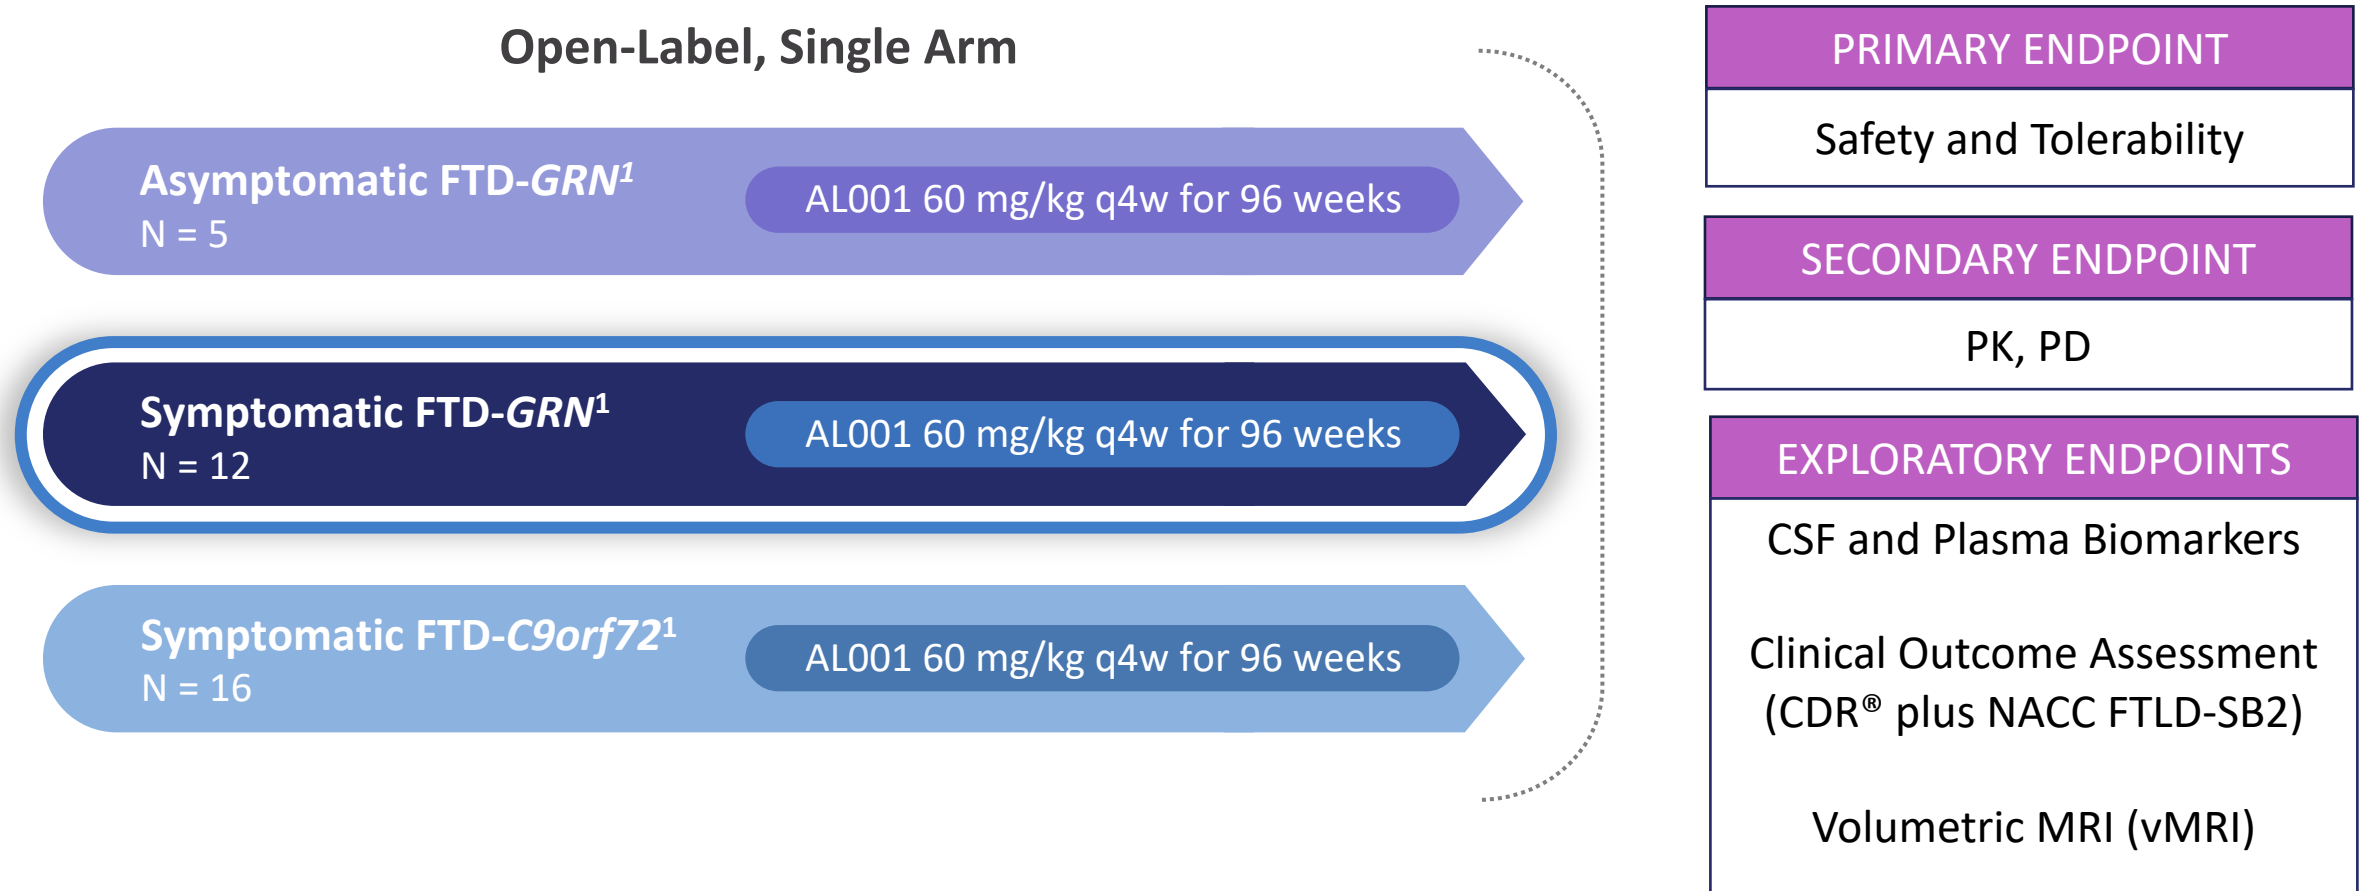

- Most common form of dementia under the age of 60
- Patients present with compulsive behavior, lack of restraint, apathy, anxiety, and aphasia
- Life expectancy after diagnosis is 7 - 10 years
- 15,000 symptomatic + ~120,000 at-risk people with progranulin mutations (FTD-GRN) in the U.S. and E.U.
 - FTD-GRN caused by coding mutations in progranulin
 - Lead to a complete loss of function in the mutated gene

MRI of Frontal and Temporal Atrophy in FTD

INFRONT-2: Phase 2 in Frontotemporal Dementia Populations

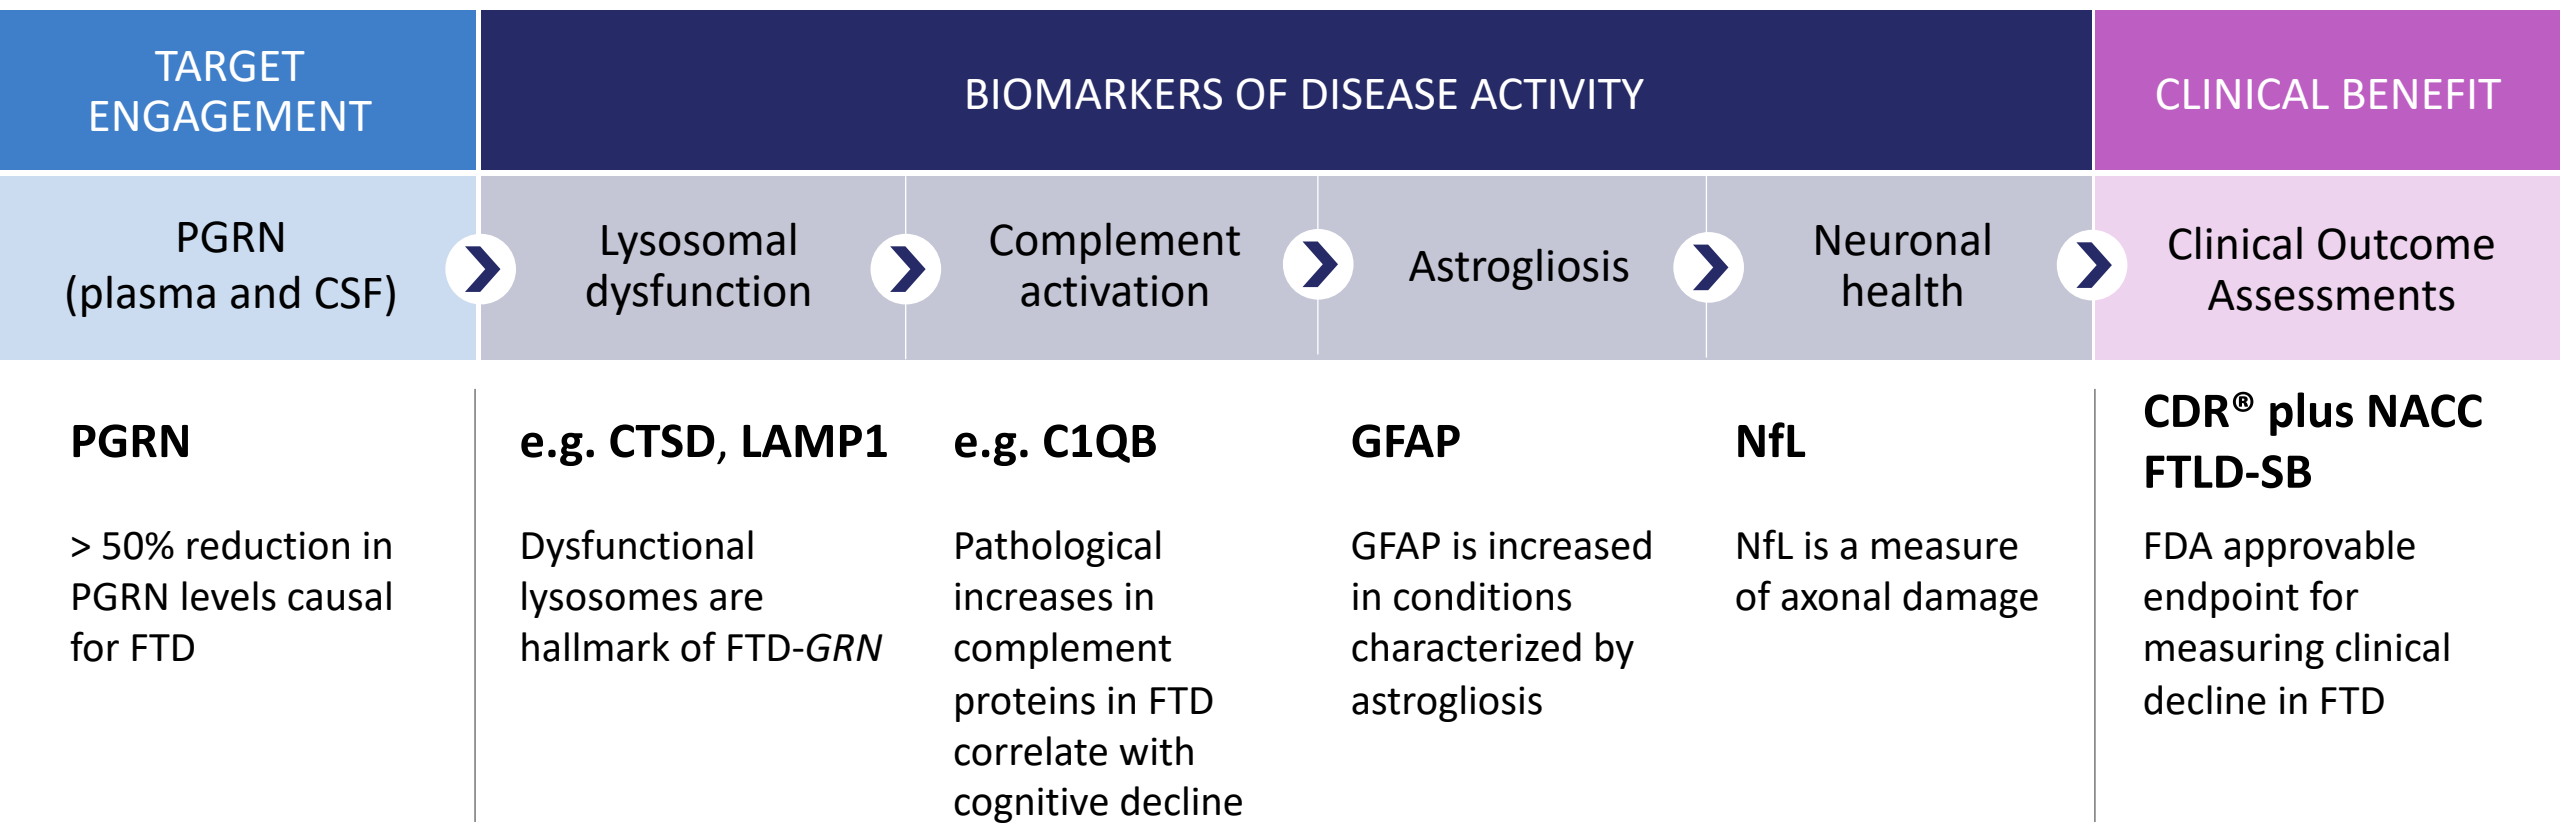

Open-Label, Single Arm

Twelve-month biomarker and clinical data presented at 2021 AAIC and CTAD conferences from the symptomatic FTD-GRN cohort

Latozinemab Impacts Key Markers of the Disease Cascade in Symptomatic FTD-GRN Patients

Key biomarkers and clinical outcome assessments reflect underlying disease activity in FTD-GRN patients

CTSD = cathepsin D; LAMP1 = lysosomal associated membrane protein 1; C1QB = complement C1q B chain; GFAP = glial fibrillary acidic protein NfL = neurofilament light chain;
CDR® plus NACC FTLD-SB: Clinical Dementia Rating (CDR) dementia staging instrument plus National Alzheimer’s Coordinating Center (NACC) behavior and language domains frontotemporal lobar degeneration (FTLD) sum of boxes (SB)

INFRONT-2: AL001 Restores PGRN in Plasma and CSF to Normal Levels

TARGET ENGAGEMENT

PGRN Plasma Concentration

PGRN CSF Concentration

INFRONT-2: Latozinemab Demonstrated Consistent Effects on Disease Biomarkers

FLUID BIOMARKERS OF DISEASE ACTIVITY

Symptomatic FTD-GRN patients at 12 months

Normalization of lysosomal and inflammatory biomarkers

Markers	Latozinemab Baseline (N=9)	Latozinemab 6 months (N=8)	Latozinemab 12 months (N=8)	Age-matched procured control (N=44)
CTSD (fm/μL)	5.2 (1.16)	3.8 (0.57)	3.1 (0.21)	3.4 (0.08)
LAMP1 (fm/μL)	0.6 (0.12)	0.4 (0.06)	0.4 (0.043)	0.4 (0.01)
C1QB (fm/μL)	0.7 (0.12)	0.6 (0.07)	0.5 (0.02)	0.5 (0.02)

INFRONT-2: AL001 Treatment Decreases Glial Fibrillary Acidic Protein (GFAP) Levels Towards Range Seen in Asymptomatic FTD-GRN

BIOMARKERS OF DISEASE ACTIVITY – ASTROGLIOSIS

GFAP Plasma Concentration

GFAP CSF Concentration

INFRONT-2: A two-step Matching Strategy to Eliminate Potential Confounding Factors in Constructing the GENFI2 Historical Control Cohort

Step 1

GENFI2 FTD-GRN
participants with at least
one post-baseline CDR® plus
NACC FTLD-SB (n=102)

Propensity
score
matching by
baseline CDR®
plus NACC
FTLD-SB

- Propensity scores were computed using a logistic regression including the most important covariate, cognition, measured at baseline using the CDR® plus NACC FTLD-SB
- Matching was done by comparing the logit propensity score

Step 2

Potential GENFI2 matches
using propensity score
matching based on CDR®
plus NACC FTLD-SB (n=25)

Blinded clinical
adjudication
matching by
NfL at
baseline, age,
diagnosis and
gender

- To further increase the chances that the matched historical control cohort would mimic a placebo group in a randomized experiment, clinical adjudication of secondary covariates, including NfL at baseline, age, diagnosis and gender were used to refine and construct the final matched historical control cohort
- This step was done on a blinded basis without knowing the progression rate.

GENFI2 matched historical
control cohort (n=10)

INFRONT-2: Contextualizing vMRI and Clinical Results with GENFI2 Matched Controls

- INFRONT-2 vMRI and clinical results compared against comparable, matched GENFI2 controls
- Comparable baseline characteristics established between INFRONT-2 FTD-GRN symptomatic cohort and GENFI2 controls in two-steps:
 - Propensity score matching¹ based on CDR[®] plus NACC FTLD-SB at baseline
 - Matching refined by age, gender, baseline plasma NfL levels, and FTD disease variant at baseline²

Baseline characteristics		INFRONT-2 (N=12)	GENFI2 Matched Controls (N=10)
CDR [®] plus NACC FTLD-SB	Mean (SD)	5.9 (3.74)	5.2 (3.60)
	Min, Max	0.5, 11	0.5, 11.5
AGE (Years)	Mean (SD)	63.2 (9.71)	62.1 (6.74)
	Min, Max	49, 79	52, 72
GENDER	Male	8 (67%)	3 (30%)
PLASMA NfL (pg/mL)	N	12	9
	Mean (SD)	62.8 (47.00)	40.3 (27.28)
	Min, Max	11.2, 148.8	9.3, 99.9
FTD DISEASE VARIANT	bvFTD	5 (42%)	5 (50%)
	PPA	3 (25%)	3 (30%)
	Both	3 (25%)	0
	Other	1 (8%)	1 (10%)

GENFI = The Genetic Frontotemporal Initiative
GENFI2 refers to the longitudinal FTD registry dataset
1. Propensity score matching is a well-established statistical method intended to mimic randomization
2. Clinical reviewers blinded to outcome data

Latozinemab-Treated FTD-GRN Participants Experience a ~48% Annual Delay in Disease Progression Compared to Matched Historical Controls

Similar findings of ~54% delay in disease progression for C9-orf72 FTD patients: Latozinemab was well tolerated in INFRONT-2

CLINICAL BENEFIT

CDR® plus NACC FTLD-SB

Parameter	Estimate ¹	95% CI
Annual Change in GENFI2 (n=10)	6.4	[4.35,8.42]
Annual Change in AL001 (n=12)	3.3	[1.38,5.28]
Difference in Annual Change (GENFI2 – AL001)	3.1	[0.24,5.88]

~48%
slowing of clinical progression
(3.1 point change)

When Compared to the ALLFTD Matched Historical Controls, Latozinemab-Treated FTD-C9orf72 Participants Experience a ~54% Annual Delay in Disease Progression

CLINICAL BENEFIT

CDR® plus NACC FTLD-SB

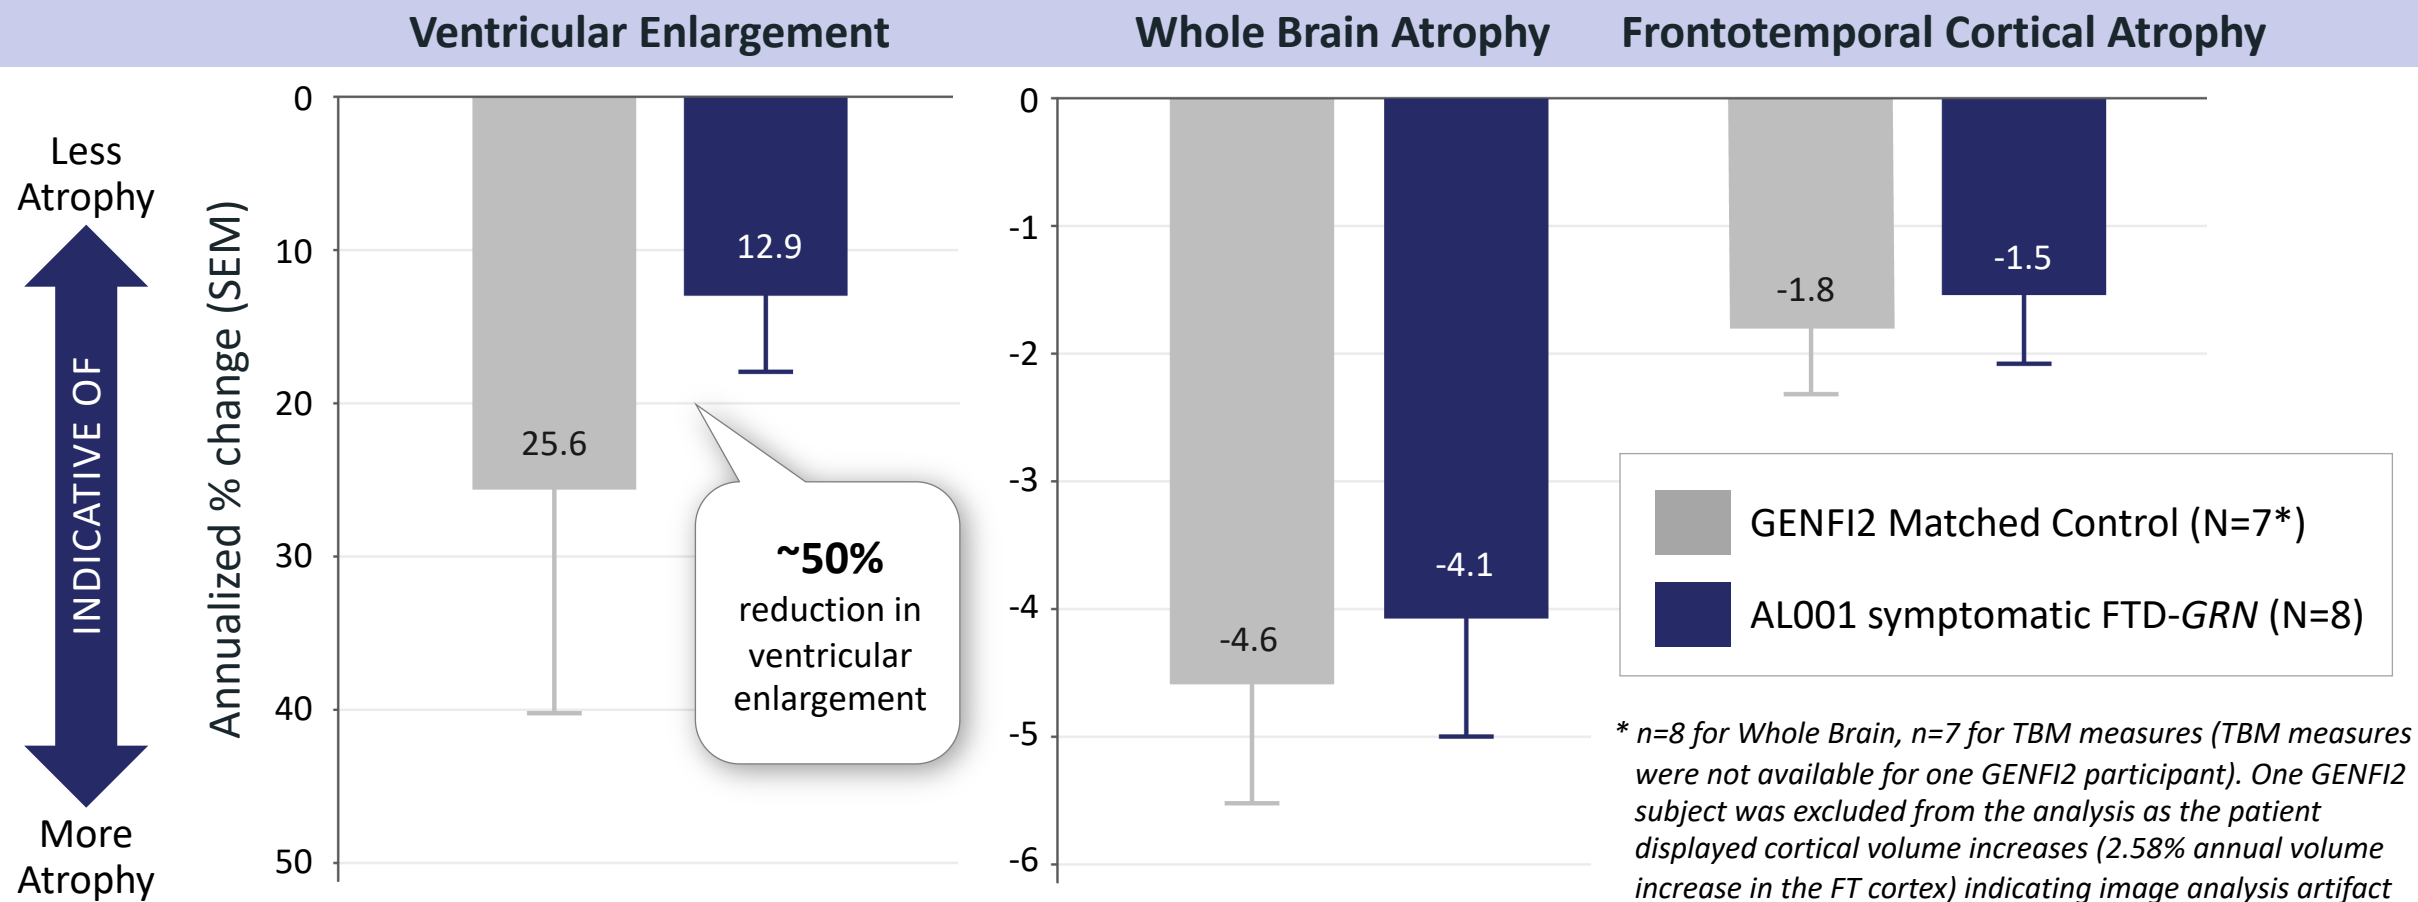

Parameter	Estimate	95% CI
Annual Change in ALLFTD (n=10) ¹	3.4	[1.30,5.60]
Annual Change in latozinemab (n=10) ²	1.6	[-0.63,3.78]
Difference in Annual Change (ALLFTD – latozinemab) ³	1.9	[-1.21,4.95]

~54% delay in disease progression

• Analysis of propensity score-matched cohort demonstrated a delay in disease progression of 0.9 points [-1.35,3.21], 36%

INFRONT-2: vMRI Data Suggest Slowing of Ventricular Enlargement and Brain Atrophy in AL001-Treated Patients vs. Historic Matched Control

BIOMARKERS OF DISEASE ACTIVITY – BRAIN VOLUME CHANGES

Enrollment Ongoing for Pivotal INFRONT-3 Phase 3 Study of AL001

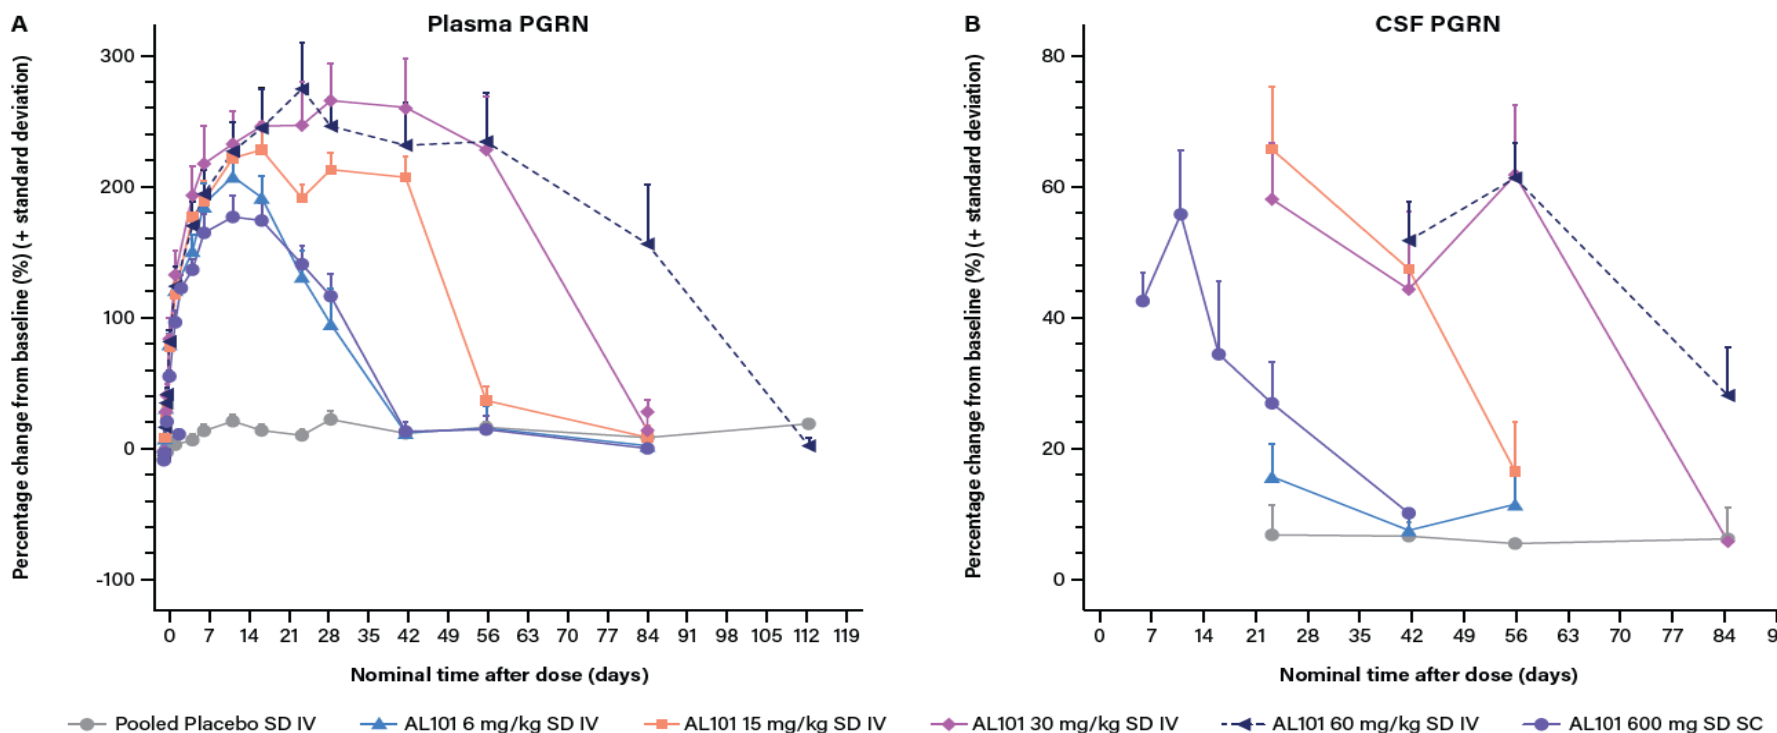

Study taking place at approximately 45 clinical centers in US, Canada, Europe and Australia

Initial data read out after 96-week treatment period

AL101 Elevated Progranulin Levels in Periphery and CSF in Phase 1

Generally well tolerated in healthy volunteers; initial Phase 1 data suggest less frequent dosing may be possible

Mean Percentage Change from Baseline in Plasma (A) and CSF (B) Concentrations of Progranulin as a Function of Time After Single Administration of AL101

Phase 1 ongoing with additional cohorts being enrolled to evaluate subcutaneous dosing

Clinical-Stage Alzheimer's Disease Candidate: AL002

AL002: Designed to Activate TREM2 in Order to Enhance Microglia Function

RATIONALE

- TREM2 signaling controls critical microglial activity
- TREM2 is a prominent risk gene for Alzheimer's disease
 - Homozygous mutations cause dementia (NHD, FTD)
 - Heterozygous mutations increase risk for Alzheimer's disease by 3x
 - Ligands include APOE, an Alzheimer's risk gene

MECHANISM

- Activates TREM2 signaling to improve functionality of microglia to clear pathology and protect neurons

STATUS

- Phase 1 study complete
- INVOKE-2 Phase 2 clinical trial on-going

Intended to improve survival,
proliferation, function
of microglia

AL002 Target and Microglia Engagement Achieved in Phase 1

Generally well-tolerated in healthy volunteers¹

Dose-Dependent Reduction in Soluble TREM2²

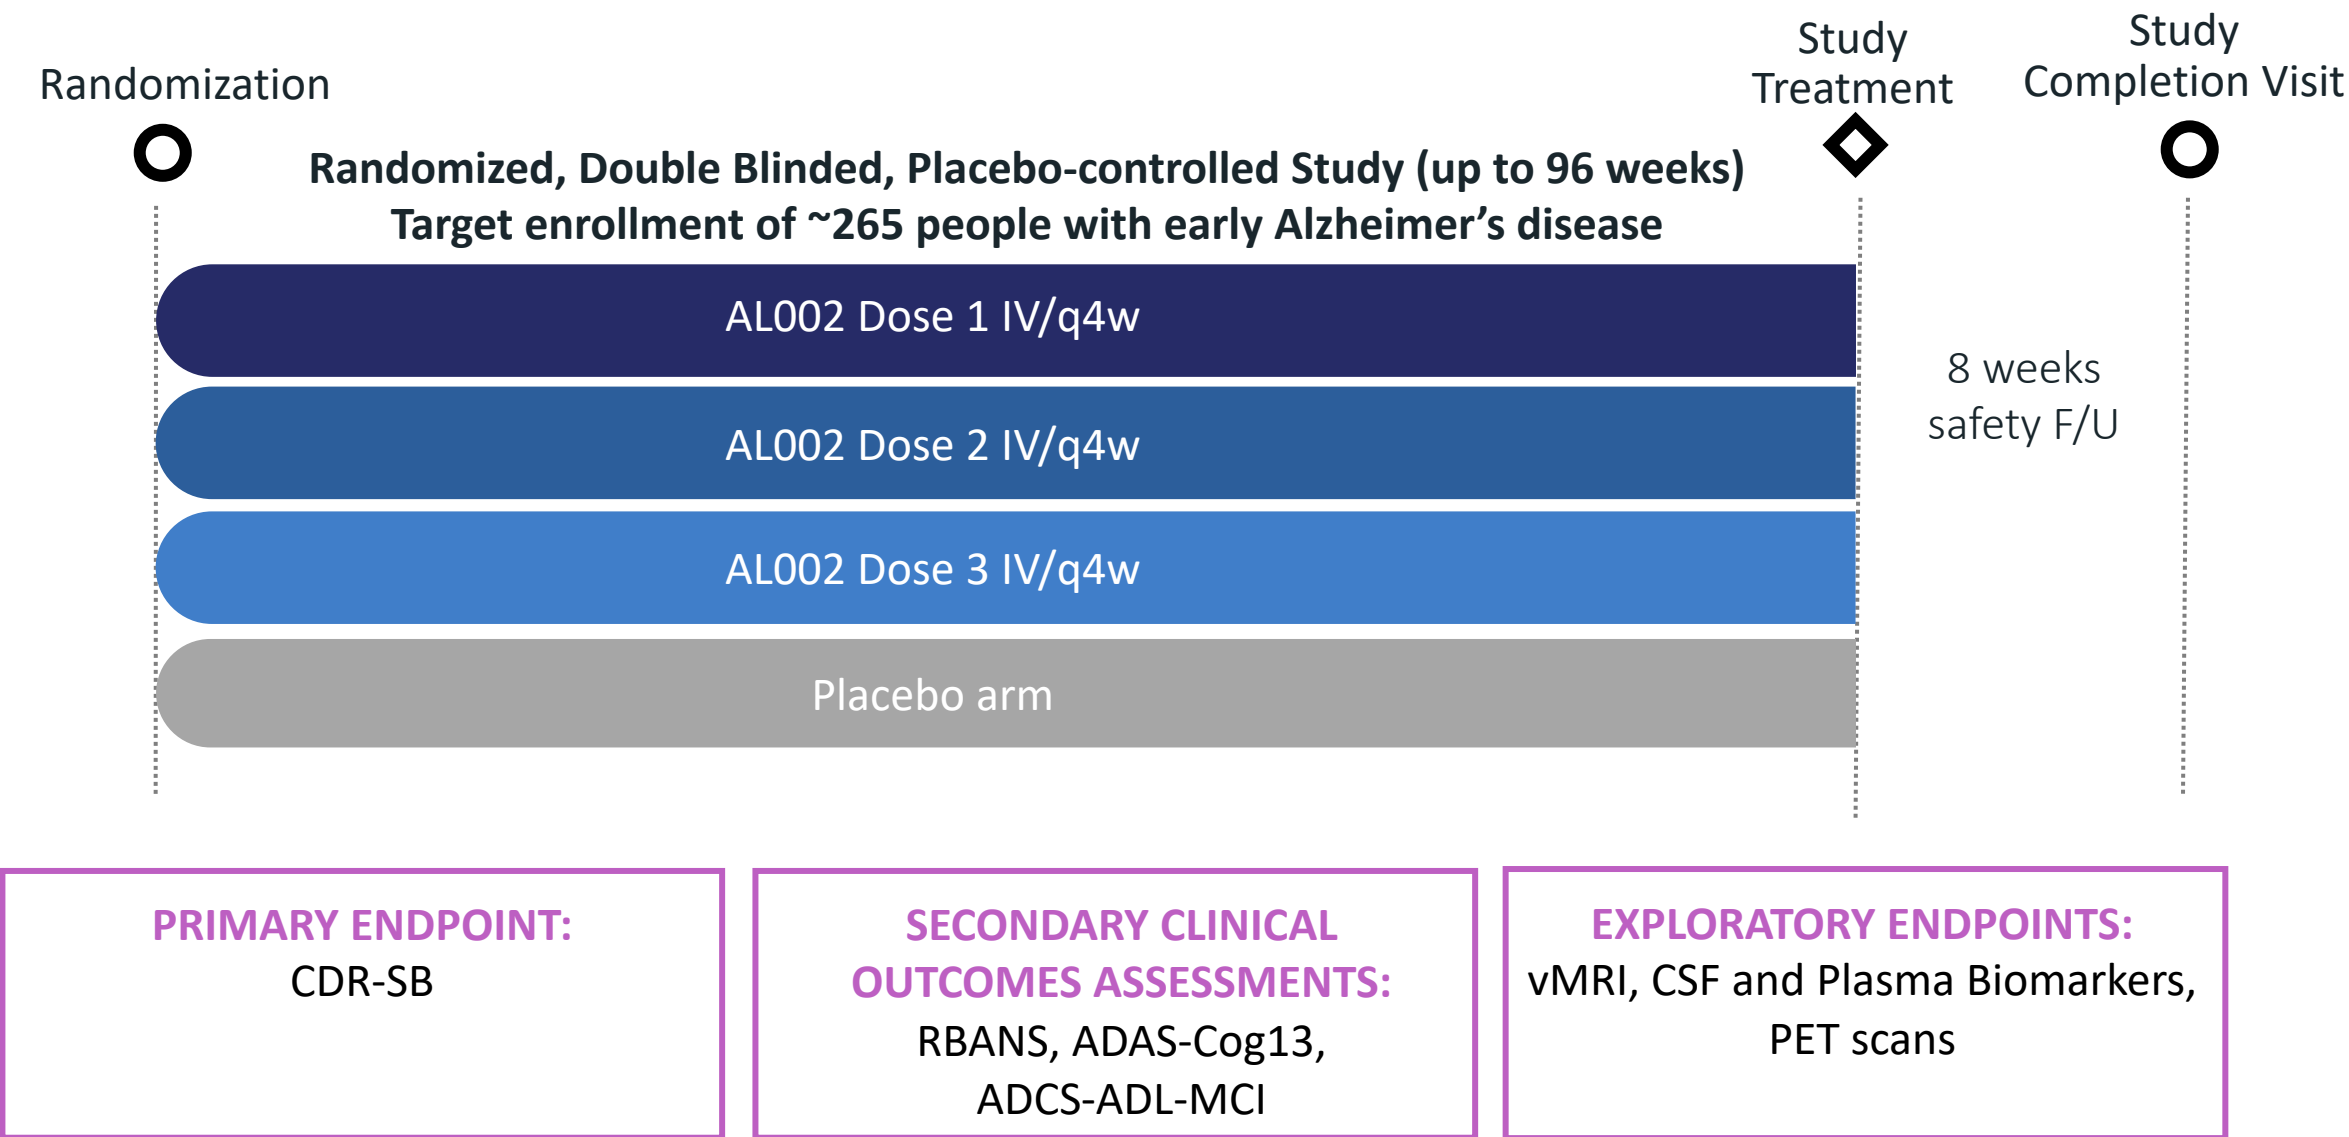

Dose-Dependent Elevation in sCSF-1R, Associated with Microglia Activation²

AL002 Treatment in Phase 1 Also Caused An Increase in CSF Levels of IL1RN and SPP1, Indicating Further Evidence of Microglial Activation

INVOKE-2 Phase 2 AL002 Study in Individuals with Early Alzheimer’s Disease

Preclinical Program for Alzheimer's Disease: AL044

Background on AL044 Targeting a Candidate Master Regulator of Microglia

Key Features of MS4A and AL044

- MS4A Member of ~22 membrane-tetra spanning 4A family, structurally related to CD20
- Expressed on microglia, CNS perivascular macrophages
- Modulate multiple aspects of AD disease risk, age of onset, progression and survival
- **AL044 our drug candidate functionally phenocopies and exceeds activities of the protective MS4A variant**
- AL044 Regulates the levels of key signaling systems in microglia; Trem2/sTrem2, CSF1R, Dectin1
- AL044 regulate microglia , proliferation, survival migration lysosomal function, immune response and energetics, genes and/or proteins
- **IND filed following pre-IND alignment**

Effects of MS4A on AD

Protective Allele	Effects on AD	Risk Allele
↓	AD Risk	↑
↑	Age of onset and survival	↓
↓	Rate of cognitive decline	↑
↑	CSF Soluble TREM2	↓
↓	Aβ Plaques & CSF Tau	↑
↓	Rate of Cortical and hippocampal Shrinkage	↑
↓	Rate of Conversion from MCI to AD	↑
↑	Protective Interactions with APOE4	↓

AL044 Mechanism of Action: a Context and Memory Dependent Microglia Recruiter

AL044

Disease Signals

TREM2, CSF1R, Dectin ligands, membrane & synaptic fragments, myelin debris, misfolded proteins, lipidated APOE, Polysaccharides, Damage-Associated Molecular Patterns, CSF1, IL34

AL044 a function modulator of MS4A4A
candidate master regulator and immune check point of microglia readiness

2nd

Double trigger system
Protective trained
immunity dependent

1st

CSF1R | TREM2 | Dectin-1 | Other signaling systems

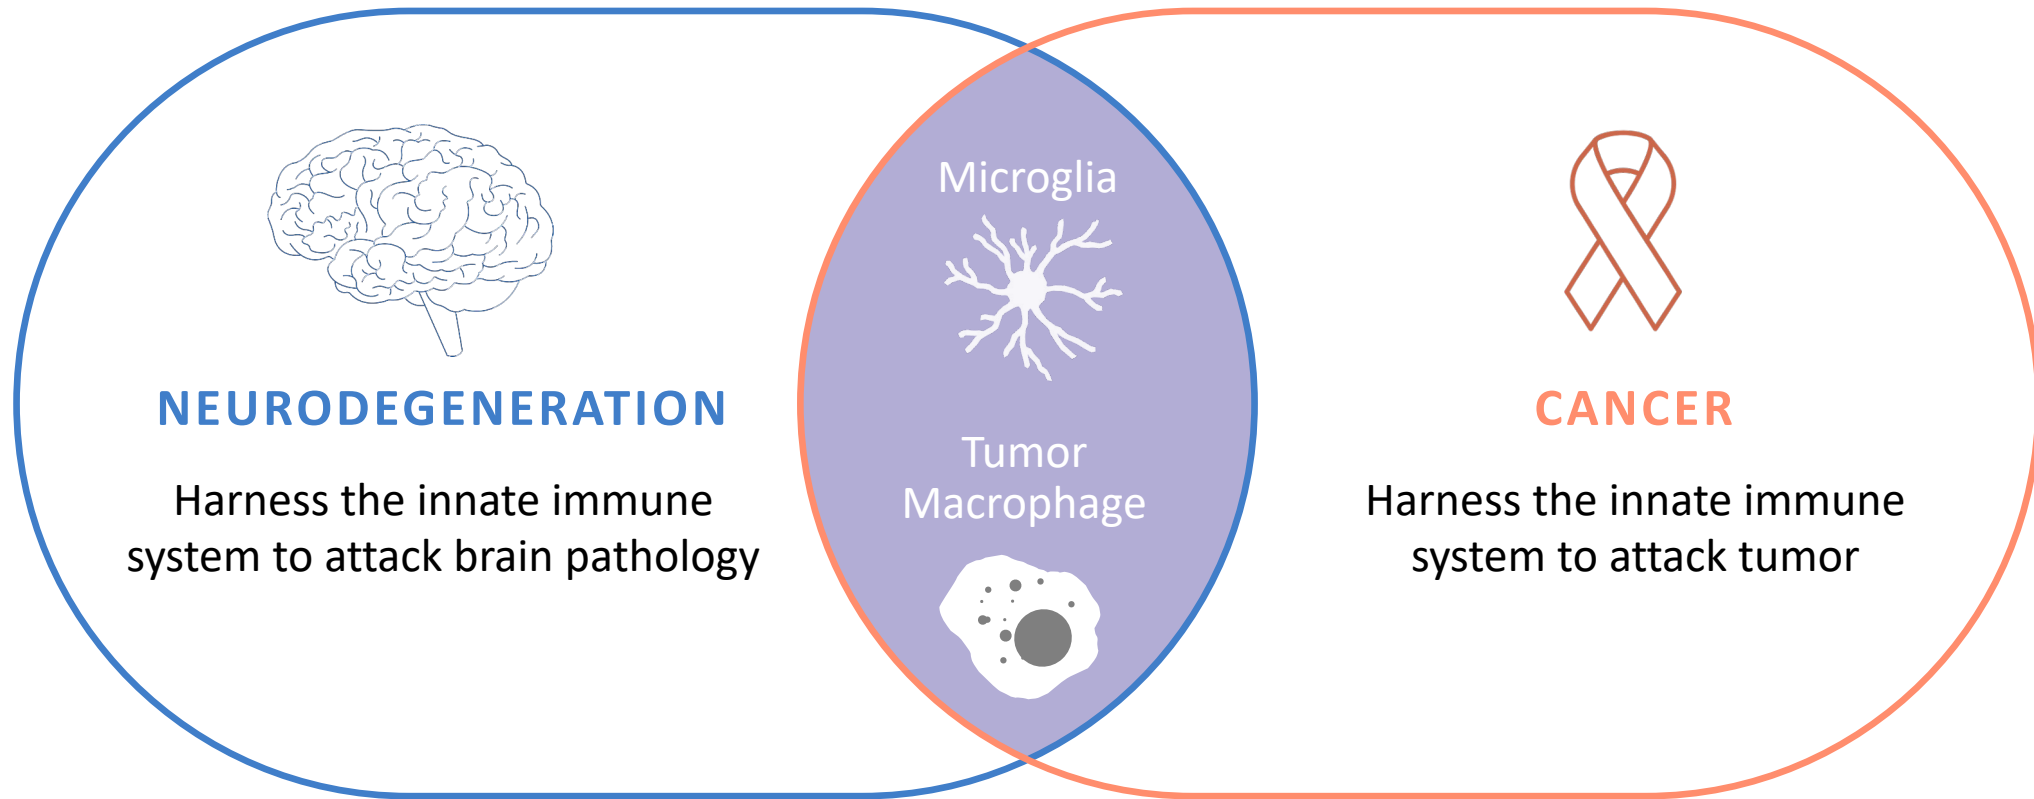

survival | proliferation | phagocytosis | migration | Lysosomes | metabolism | Innate immune memory

Clearing misfolded proteins | Resolve Inflammation | Removal damaged myelin | Removal damaged synapses | Lipid processing | Immunity to infection | Protect vasculature

Broad Therapy for AD, HDLS other neurodegenerative diseases
Stand-alone and in combination with therapies for mis-folded proteins

Alector Oncology Overview

Neurodegeneration and Cancer Converge at the Innate Immune System

AL009: Marshalling the Innate Immune System to Combat Tumor Growth

TARGET

Siglec-Sialic acid innate checkpoint pathway

SCIENTIFIC RATIONALE

Human genetics and tumor model data show Siglecs drive immune suppression

STATUS

IND Submission expected later this year

PRODUCT CANDIDATE

- Engineered Fc fusion protein
- Blocks multiple Siglecs to activate innate and adaptive immunity
- Engages activating Fcγ receptors

PRECLINICAL ACTIVITY

- Repolarizes suppressive macrophages, activates T cells and enhances ADCC/ADCP function
- Demonstrates robust anti-tumor activity in multiple models (single agent and combined with checkpoint inhibitors)

Monotherapy Activity in Breast Cancer Model

AL008: Potential Best-in-Class Dual Function SIRP α -CD47 Pathway Activator

TARGET

SIRP α - CD47
pathway

SCIENTIFIC RATIONALE

Tumors leverage pathway to hide from immune
system

STATUS

Re-acquiring rights granted to
Innovent Biologics

PRODUCT CANDIDATE

- Selectively binds to multiple SIRP α variants
- Does not inhibit T-cell activator SIRP α

PRECLINICAL ACTIVITY

- Promotes T-cell proliferation more effectively than anti-CD47
- Demonstrates robust anti-tumor activity in multiple models (single agent and with checkpoint inhibitors)
- No decrease in red blood cells or platelets

AL008 enables T-Cell Activation
